Edit 1:

On Sequential Player B screen:

Currently says:

**Amount the returner decided to sent back to the other
Player A:**

Change to:

Amount player A sent to you is: \$X.

Decide how much you would like to send back.

Edit 2:

**Voter screen when we reveal what they select, do NOT
say who it was selected by, just tell them what they are
playing.**

Edit 3:

On trust instructions

Currently reads:

Treatment Reveal: When you are player A , you will always be matched with someone of a certain pro--social score. You will be random assigned different players each round, but they will always have the same pro--social score. Thus if you are player A in round 1 and matched with an above pro--social score median type you will be paired with an above pro--social score median type, but not the same person, every time you are player A.

Change to:

Notes on pairings: All pairings are anonymous and you will play with many different people. You are re-matched with a

new person each round. When you are player A, you will always be matched with someone of a certain pro-social score. You will be random assigned different players each round, but they will always have the same pro-social score. Thus if you are player A in round 1 and matched with an above pro-social score median type you will be paired with an above pro-social score median type, but not the same person, every time you are player A.
